If you had to provide
a complete record
of your video
communications,
could you?

A COMPLETE HIGH VOLUME RECORDING SOLUTION FOR VIDEO COMMUNICATIONS ARCHIVING

Regulations around the world currently require financial, legal and medical institutions to maintain archived records of voice communications in the event they are called into evidence for inquiries or investigations. As an example, Financial Services Agency (FSA) requirements in the UK mirror similar policies around the globe that stipulate financial companies must be able to provide recorded documentation for specific types of conversations. As more organizations migrate to video communications as a mainstream method of collaborating, they too will likely need to comply with similar requirements in the future.

TANDBERG Compliance Appliance™ (TCA) is the industry's first and only video recording product that provides a seamless approach to document video conversations. While many organizations have the ability to archive emails and record phone calls and meetings, there is no solution in place to seamlessly record and transcode large volumes of video meetings for archival. The TANDBERG Compliance Appliance™ integrates with any standards-compliant video conferencing network to record the video and audio for up to 50 point-to-point video calls.

CONSIDERATIONS FOR VIDEO COMMUNICATIONS COMPLIANCE

Organizations need to consider several elements when determining the archival requirements of their video conferencing network:

EXTERNAL REQUIREMENTS

- Would you be able to provide adequate documentation of video communications if investigated?
- What are the current and future regulations for the recording, archiving and retrieval of communications records?
- As your organization migrates to video collaboration, will you be able to document the important messages delivered through nonverbal communication?
- What recording and archiving solution is currently in place to document audio and video calls?

NETWORK AND END USER REQUIREMENTS

- How do you preserve, secure and track video calls with your video communications network?
- Does your video recording integrate seamlessly with your Storage Area Network (SAN)?
- Is it interoperable with your existing network, regardless of vendor?
- Is it easy to use, secure and reliable?
- Will it impact the quality of your calls?
- Does it provide the flexibility to scale as your organization grows?

TANDBERG SOLUTIONS

Compliance Appliance: Seamless. Automated. Secure.

A SIMPLE SOLUTION TO ENSURE COMPLIANCE

The TANDBERG Compliance Appliance™ is completely interoperable with standards-based, PC-based video, desktop video, executive conferencing and even Telepresence. Whether you have only a few endpoints you need to record or thousands, you can scale TCA to meet specific needs. TCA is flexible enough to balance the needs of your organization with the requirements of any governing body.

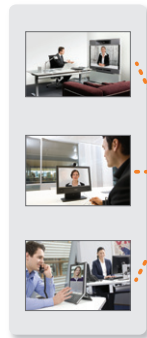

- **Scalable** — TCA is the only video conference recorder that can scale to accommodate the size of your network. Whether you need to record calls between two executive conference rooms or 20,000 video endpoints, you can expand to meet your evolving needs, regardless of how expansive they are. Multiple TCAs can be run in parallel to capture as many endpoints as needed.
- **Compliant** — TCA meets the legal requirements that apply to other media such as audio recordings and emails and are likely to apply to video conferences.
- **Flexible Configuration** — TCA can be configured to meet the unique needs of your organization, as well as local, regional or national regulatory regulations or requirements.
- **Simple Retrieval of Data** — TCA assigns a file name to each recording consisting of the date, time and the endpoint IDs, making it easy to identify and retrieve specific conferences using any standard file management tool.
- **Tamper-Evident Storage** — TCA's storage method assigns each recording a checksum to provide proof of authenticity — a critical element in determining admissibility of evidence.
- **Disaster Proof** — If a recording fails for any reason, such as one endpoint dropping out, TCA automatically terminates the entire conference and starts recording again when all the participants reconnect. This ensures a complete recording of a conference.
- **Space-Saving Compression** — TCA automatically compresses video and audio files to save storage space. It also gives you the option to store audio and video in separate locations, providing the flexibility to maintain the records for different periods of time.
- **Seamless Integration with Most Networks** — TCA is interoperable with any standards-based network that is connected to a TANDBERG VCS.

TANDBERG SOLUTIONS

**Compliance Appliance:

LOCATION A

Location A TCA records most user calls as it is closest to most endpoints, and local video meetings remain on the local LAN.

LOCATION B

Location B requires recordings to be stored in country. Location B can also be configured as back up to Location A for redundancy.

A COMPLETE VIDEO ARCHIVAL COMPLIANCE SOLUTION

The TANDBERG Compliance Appliance™ is the recording solution that will help protect your organization from potential disputes and maintain compliance with regulatory requirements. It integrates seamlessly with your existing infrastructure, is easy to configure and requires minimal on-going management by the network administrator. Most importantly, it provides the peace of mind that your most important video communications are documented and available when the need arises.
